

CodingClub

The Study Bar's popular coding groups are guided by our resident software developers and guest industry professionals. CodingClub builds programming connections, problem solving skills, improves socialization, and fosters a team oriented mindset. Students who code in a group setting get to let their abilities shine in an immersive and engaging way while making new friends. Students in CodingClub work on new skills of interest, outlined projects or their own custom projects.

Details

The Study Bar provides opportunities to develop coding skills, design games & apps, create Minecraft mods, program a robot, learn 3D design and printing. We are proud to deliver coding fun for students of all experience levels.
